TEST PROCEDURE FOR AIRBORNE EQUIPMENT

THE FOLLOWING MEETS SECTION 15, SECTION 17, & SECTION 21 OF THE
ABOVE TEST SPECIFICATION

Formal Name: RockAIR

Kind of Equipment: Satellite/Cellular Tracker

Test Configuration: Tabletop (Tested at 5vdc V ac; Tested at 24 V dc)

Model Number(s): RockAIR

Model(s) Tested: RockAIR

Serial Number(s): JJA-RQN-A

Date of Tests: May 5, 8 & 9, 2017

Test Conducted for: TracPlus Global Ltd
Level 1, The Clarion Building, 286 Princes Street
Dunedin, Otago 9054

NOTICE: "This test report relates only to the items tested and must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the U.S. Government." Please see the "Additional Description of Equipment Under Test" page listed inside of this report.

Model Tested: RockAIR
Report Number: 22777
Project No. 8824

1.0 INTRODUCTION:

On May 5, 8 & 9, 2017, a series of emissions and susceptibility tests were made to demonstrate that the RockAIR, Model(s) RockAIR, Serial No. JJA-RQN-A, manufactured by Rock 7 Mobile was tested to the requirements of RTCA/DO-160G (December 8, 2010), Environmental conditions and Test Procedures for Airborne Equipment using the following test procedure(s): Section 15, Section 17, & Section 21.

2.0 TEST FACILITY:

D.L.S. Electronic Systems, Inc. is a full service EMC Testing Laboratory accredited to ISO Guide 17025. NVLAP Certificate and Scope can be viewed at <http://www.dlsemc.com/certificate>. Our facilities are registered with the FCC, Industry Canada, and VCCI. All tests were performed by personnel of D.L.S. Electronic Systems, Inc. at the following location(s):

Main Test Facility:
D.L.S. Electronic Systems, Inc.
1250 Peterson Drive
Wheeling, Illinois 60090

A list of the test equipment used, along with identification and calibration data, is included in the Table of each Appendix of this report. All primary equipment was calibrated against known reference standards with a verified traceable path to NIST.

1250 Peterson Dr., Wheeling, IL 60090

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Project No. 8824

3.0 TEST SET-UP:

All emissions and susceptibility tests were performed at D.L.S. Electronic Systems, Inc. The RockAIR was placed on a conductive table. The following describes the lab that was used for testing:

LAB J: 21' long x 10' wide x 10' high screen shielded enclosure.

All lines leaving the room were filtered. The auxiliary equipment was located outside the main room.

The tests were run in the following lab:

LAB J: Section 15, Magnetic Effect

LAB J: Section 17, Voltage Spike

LAB J: Section 21, Emission of Radio Frequency Energy

1250 Peterson Dr., Wheeling, IL 60090

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Project No. 8824

4.0 OPERATING CONDITIONS OF TEST SAMPLE:

All test measurements were made at a laboratory temperature of **72°F** at **38%** humidity with the following mode of operation:

The RockAIR is configured for operation using an iOS application (provided).

There are effectively four modes of operation.

Inactive, with no external power applied, either via USB or 12-24VDC

Active with external power applied, either via USB or 12-24VDC

Active and transmitting via cellular IP

Active and transmitting via Iridium SBD

For testing purposes, it is recommended that regular periodic tracking be disabled, and transmissions be triggered manually as required using the iOS application. The same application allows the enabling and disabling of cellular IP to force the device to use cellular IP or satellite SBD networks as required.

As each transmission from the device includes reception of handshake data from the corresponding satellite or cellular network, a single position report manually transmitted via the iOS application is considered to include both data transmission and reception.

Powered On with either USB 5Vdc or 24Vdc.

5.0 PERFORMANCE MONITORED:

The RockAIR performance was monitored as follows:

Power LED is monitored for functional status. EUT connected via Bluetooth to iPhone 7 running TP Connect app.

1250 Peterson Dr., Wheeling, IL 60090

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Project No. 8824

6.0 DESCRIPTION OF TEST SAMPLE: (See also Paragraph 7.0)

6.1 DESCRIPTION:

The RockAIR is a self-contained tracker designed for use in light-aircraft and ground vehicles. It transmits GPS position reports, text messages and distress notifications using either the Iridium satellite Short Burst Data network and cellular IP networks based on network coverage and availability. It is powered externally via USB or vehicle power, and has an internal battery for the transmission of queued and shutdown reports when external power is removed. It is Bluetooth BLE capable and can be paired with a smart device for advanced features including two way messaging, device configuration and diagnostics.

6.2 PHYSICAL DIMENSIONS OF EQUIPMENT UNDER TEST:

Length: 119mm x Width: 98mm x Height: 26mm

11.0 REFERENCES:

RTCA/DO-160G "Environmental Conditions and Test Procedures for Airborne Equipment" (Radio Technical Commission for Aeronautics, December 8, 2010)

NOTE: All listed paragraphs, figures and tables are reference to the above standard unless otherwise specified.

12.0 TEST RESULTS:

The RockAIR was subject to the test procedure(s) Section 15, Section 17, & Section 21. A detailed explanation of how these tests and their measurements were made is shown in Appendix(es) A-C at the end of this report.

13.0 CONCLUSION OF EMISSIONS AND SUSCEPTIBILITY TESTS:

The RockAIR, Model(s) RockAIR, **meets** Section 15, Section 17, & Section 21 of RTCA/DO-160G (December 8, 2010), Environmental conditions and Test Procedures for Airborne Equipment. See the Appendix(es) A-C for a detailed explanation of the test results.

APPENDIX A

RTCA/DO-160G

SECTION 15

PARAGRAPH

MAGNETIC EFFECT

1250 Peterson Dr., Wheeling, IL 60090

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 15 Magnetic Effect

Appendix: A

1.0 PURPOSE:

This test determines the magnetic effect of the equipment to assist the installer in choosing the proper location of the equipment in the aircraft.

2.0 TEST PROCEDURE:

The equipment is operated in the steady state mode producing the maximum magnet deflection and oriented such that the maximum magnet deflection is produced. A measurement is made of the distance between the magnet pivot and the nearest part of the equipment at which the angle of DC exists.

While bringing the equipment and the magnet closer together and then further apart, the distance measurements were recorded which produce the deflection angle of DC. The minimum distance measured was used to determine the equipment class.

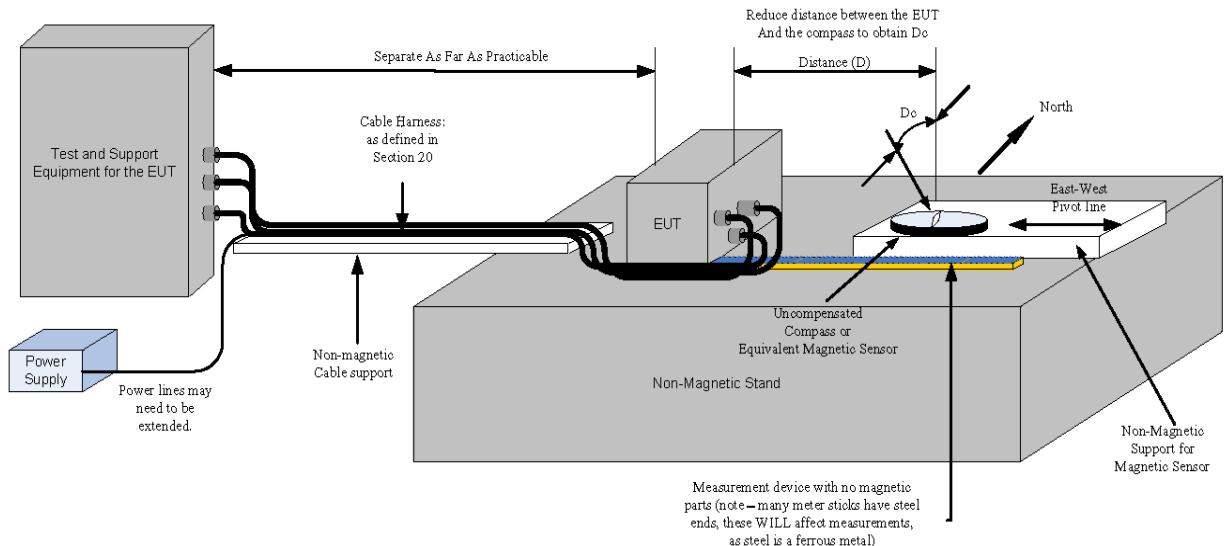

Figure 15-1 Test Installation and Procedure

1250 Peterson Dr., Wheeling, IL 60090

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 15 Magnetic Effect

Appendix: A

3.0 EQUIPMENT CATEGORY:

The RockAIR was subjected to **Equipment Category Z**.

<u>Equipment Category</u>	<u>Distance for a Deflection of DC</u>
Z	less than .3 meters

4.0 LIMITS & RESULTS:

4.1 LIMITS:

The magnetic effect of the equipment was determined in terms of the deflection of a free magnet in a uniform magnetic field having a horizontal intensity of $14.4 \text{ A/m} \pm 10\%$ when the RockAIR is positioned on the east-west line through the pivot of a magnet.

4.2 RESULTS:

The RockAIR was tested with the measurements lying in between the distance of Deflection of DC for the Equipment Class selected by the manufacturer.

The RockAIR meets RTCA DO-160G, Section 15, Category Z.

Lab used: J

Tested to Section:

Summary:

EUT was tested in 4 modes, each powered by USB 5Vdc and 24Vdc. There were no problems found at this level.

MAGNETIC EFFECT

DATA SHEETS

1250 Peterson Dr., Wheeling, IL 60090

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 15 Magnetic Effect

Appendix: A

RTCA/DO-160G Section 15 Magnetic Effects

Calculation of Dc:

$$D_c = \frac{14.4 \text{ A/m (18.144uT)}}{\text{Horizontal Component of Ambient Field Strength}}$$

Magnetic Field at D.L.S. Electronic Systems, Inc. = ~ 18.889uT
(National Geophysical Data Center, 10-23-13)

If Ambient Magnetic Field is 18.144uT +/-10%, Dc = 1

Results:

Reducing the distance between the compass and the EUT(s) to obtain the allowable deflection (Dc = 1 = 1°) resulted in the following:

EUT:TracPlus RockAIR s/n:JJA-RQN-A

DATE OF TEST:May 09, 2017

Deflection(Dc): 1°

Distance of Dc: 0 < D ≤ .3m

Category: Meets Category Z Equipment.

EUT was tested in both USB Power and 24Vdc Power modes.

Model Tested: RockAIR
Report Number: 22777

Appendix B

APPENDIX B

RTCA/DO-160G

SECTION 17

PARAGRAPH: 17.4

TEST PLAN:

VOLTAGE SPIKE

1250 Peterson Dr., Wheeling, IL 60090

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 17 Voltage Spike

Appendix B

1.0 PURPOSE OF THE TEST:

This test determines whether the equipment can withstand the effects of voltage spikes arriving at the equipment on its power leads, either AC or DC. The main adverse effects to be anticipated are:

- a. Permanent damage, component failure, insulation breakdown.
- b. Susceptibility degradation, or changes in equipment performance.

2.0 EQUIPMENT CATEGORIES:

The RockAIR was subjected to **Category B**.

Category B

Equipment intended primarily for installations where a lower standard of protection against voltage spikes is acceptable is identified as Category B.

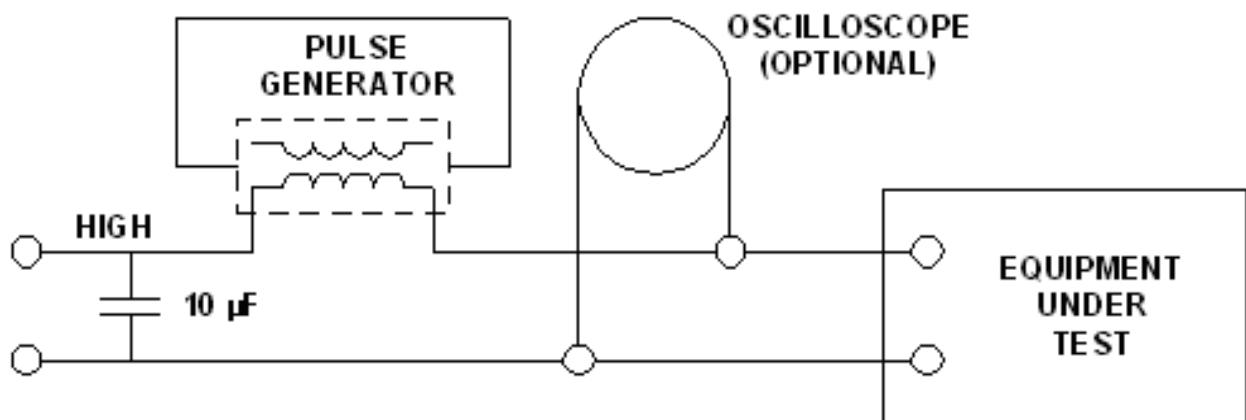

1250 Peterson Dr., Wheeling, IL 60090

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 17 Voltage Spike

Appendix B

3.0 TEST SETUP AND APPARATUS:

The transient generator used produced the waveform shown in Figure 17-1 of the test specification. A typical test setup is shown in Figure 17-2. Any method of generating the spike may be used if the waveform complies with Figure 17-1. The generator was inserted in series with the RockAIR.

NOTE: FOR EQUIPMENTS DRAWING HIGH CURRENTS, ALTERNATE TEST METHODS MAY BE REQUIRED (To avoid saturating transformer etc.).

Figure 17-2 Voltage Spike Test Setup, DC or Single Phase AC

4.0 TEST PROCEDURE:

With the equipment under test disconnected, the transient wave shape was verified to be within specification. The RockAIR was set to its designated voltage. A series of positive and negative spikes (described in Figure 17-1 of the Standard) were injected to each of the primary inputs of the equipment under test. A minimum of 50 transients of each polarity were injected within a period of one minute. The test was repeated for each operating mode or function of the equipment.

1250 Peterson Dr., Wheeling, IL 60090

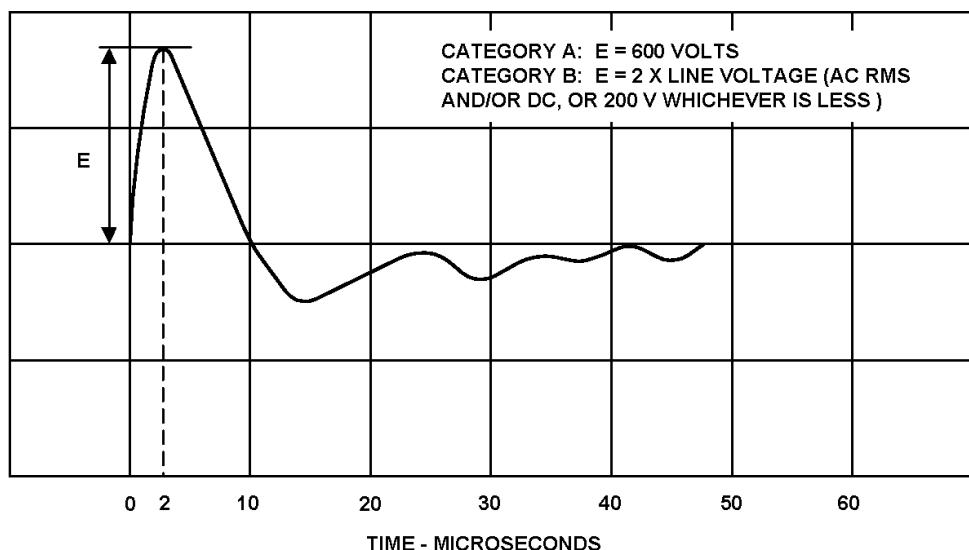

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 17 Voltage Spike

Appendix B

5.0 LIMITS & RESULTS:

5.1 LIMITS:

A following Voltage Spike Waveform was used for the test:

THE GENERATOR SOURCE IMPEDANCE SHALL BE 50Ω NOMINAL. THE SPECIFIED VOLTAGE AND DURATIONS ARE FOR OPEN CIRCUIT CONDITIONS ONLY. THE PEAK VOLTAGE MAY BE SUBSTANTIALLY LOWER WITH THE EQUIPMENT CONNECTED. THE GENERATOR SOURCE IMPEDANCE SHALL BE VERIFIED BY TESTING WITH A $50 \Omega \pm 10\%$ LOAD RESISTOR, AND SHALL PRODUCE ONE HALF OF THE SPECIFIED VOLTAGE $\pm 10\%$.

Note: The waveform shown above is typical. The waveform requirement is accomplished if the pulse rise time is less than or equal to $2 \mu\text{sec}$ and the total pulse duration is at least $10 \mu\text{sec}$.

Appendix B

5.0 LIMITS & RESULTS (CON'T):

5.2 RESULTS:

The RockAIR **meets RTCA DO-160G, Section 17, Category B.**

Lab used: J

Tested to Section: 17.4

Summary:

EUT tested with 24Vdc input power only. There were no problems found at this level. See the data sheets at the end of this appendix for the test results.

PARAGRAPH: 21.4 & 21.5

EMISSION OF RADIO FREQUENCY ENERGY

1250 Peterson Dr., Wheeling, IL 60090

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 21 Emission of Radio Frequency Energy

Appendix: C

1.0 PURPOSE OF THE TEST:

These tests determine that the equipment does not emit undesired RF noise in excess of the levels specified.

2.0 EQUIPMENT CATEGORIES:

Categories are defined in terms of location and separation between the equipment and aircraft radio antennas. As these parameters are widely linked to aircraft type and size, some examples are given with each category definition.

The RockAIR was subjected to the requirements of **Category M**:

Category M

Equipment and interconnected wiring located in areas where apertures are EM (electromagnetically) significant and not directly in view of radio receiver's antenna. This category may be suitable for equipment and associated interconnecting wiring located in the passenger cabin or in the cockpit of a transport aircraft.

Appendix: C
RTCA/DO-160G Section 21 Emission of Radio Frequency Energy

3.0 TEST SETUP AND APPARATUS:

The radiated setup can be seen in Figure 21-11 shown below:

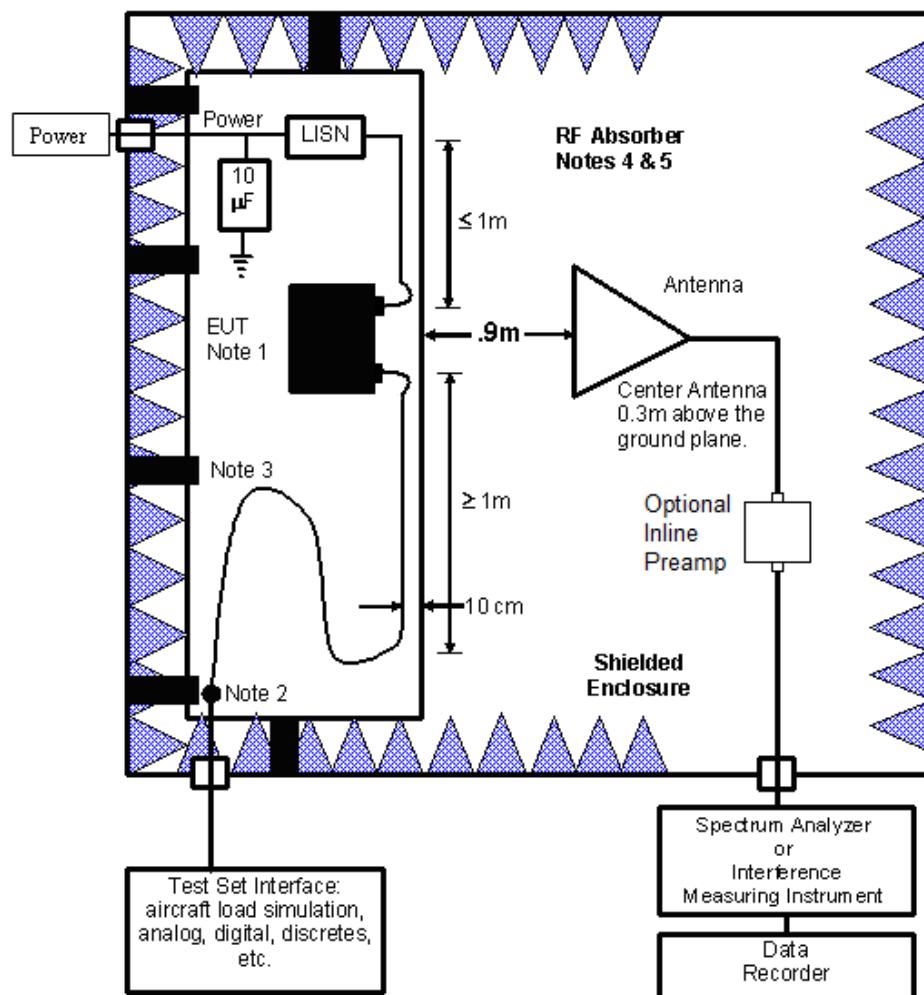

Figure 21-11 – Radiated Emissions Test Setup

- Note 1** See Section 20.3 for EUT general requirements.
- Note 2** End of exposed cable. Unshielded cable may be shielded from here to the wall.
- Note 3** Bonding strap.
- Note 4** RF absorber shall be placed above, behind, and on both sides of test setup boundary, from ceiling to ground plane. The absorber shall extend ≥ 50 cm in front of the ground plane.
- Note 5** RF absorber shall be placed behind the test antenna, from ceiling to floor. The distance between the absorber and the antenna shall be ≥ 30 cm.

Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 21 Emission of Radio Frequency Energy

Appendix: C

4.0 TEST PROCEDURE:

Conducted RF Emission:

Measure conducted emissions from 150 kHz to 152 MHz. Interference currents generated by the equipment shall be measured by using a clamp-on interference measuring device.

- a. EUT emissions within the frequency ranges and in excess of the values given in Figure 21-1 shall not appear on any power line normally connected to an aircraft bus.
- b. EUT Emissions within the frequency ranges and in excess of the values given in Figure 21-2 shall not appear on any interconnecting cable bundles. Primary power lines are not considered to be interconnecting cable bundles. Antenna feed cables are considered to be interconnecting cables while in a non-transmitting or receive mode.
- c. Figure 21-6 shows a simplified test arrangement for the use of the current probe.
- d. Install the current probe five centimeters from the EUT. If the EUT connector plus back shell length exceeds five centimeters the probe shall be placed as close to the connector back shell as possible and the position noted.
- e. Measure and record the EUT emissions and apply the appropriate limit from Figures 21-1, & 2 for the selected category.

1250 Peterson Dr., Wheeling, IL 60090

Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 21 Emission of Radio Frequency Energy

Appendix: C

4.0 TEST PROCEDURE (CON'T):

Radiated RF Emission:

Measure radiated emissions from 100 MHz to 6000 MHz.

- a. Radiated interference fields generated by the equipment within the frequency ranges, and in excess of the values shown in Figure 21-8 for the appropriate categories, shall not be radiated from any unit, cable or interconnecting wiring.
- b. A typical arrangement of equipment for conducting the radiated RF emission test is shown in Figure 21-11.
- c. Field strength units are obtained by using any appropriate antenna and adding the appropriate antenna factor to the measured voltage in dB microvolts. Appropriate correction factor for cable losses and matching networks must also be applied.
- d. Linearly polarized antennas are required for radiated tests. Measure radiated emissions using both vertically and horizontally polarized orientations.
- e. Directly expose apertures in the EUT (e.g. displays, CRTs, connectors) to the receiving antenna, which may require additional EUT orientations or receive antenna positions. If all EUT apertures are not exposed to the receive antenna, justification must be documented in the test report.
- f. Consider EUT realistic operating modes which produce maximum emission.
- g. Radiated ambient data (EUT “off” and test support equipment “on”) is required only if EUT emissions are greater than 3 dB below the selected category limit.
- h. It is good engineering practice to check ambient radiated emissions prior to a radiated emissions test, and it is desirable that the ambient emissions be at least 6 dB below the selected limit time.
- i. Measure and record the EUT emissions conditions and apply the appropriate limit from Figure 21-8 for the selected category.

1250 Peterson Dr., Wheeling, IL 60090

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 21 Emission of Radio Frequency Energy

Appendix: C

4.0 TEST PROCEDURE (CON'T):

General Requirements:

The equipment under test shall be set up on a ground plane and operated in accordance with the criteria in Subsection 20.3 subparagraph a and parts 1, 2 and 5 of subparagraph b, with the following additions:

- a. For radiated emission measurements as in Subsection 21.5, antenna spacing to the ground plane edge and the EUT spacing from the ground plane edge shall be maintained as shown in Figure 21-11.
- b. Interference shall be measured using the peak detector function of the interference measuring equipment. Interference measuring instruments with selectable IF bandwidths (BW) may be used, and the selected BW must be the values given in the following table.

Frequency Bands	BWI
0.15 – 30 MHz	1 kHz
30 – 100 MHz	10 kHz
100 – 400 MHz	10 kHz
400 – 960 MHz	100 kHz
960 – 6000 MHz	1 MHz

Note 1: It may be necessary to use an in-line low noise preamplifier at the sense antenna output in cascade with the measurement receiver to lower the measurement noise floor for proper measurements in the notches above 960 MHz defined for categories M, H, P & Q.

Note 2: For measurement receivers or spectrum analyzers with a “maximum hold” feature that retain maximum detected levels after multiple scans over a given frequency range, multiple faster sweeps that produce the same minimum test times as shown in Table 1 are acceptable.

- c. Line Impedance Stabilization Networks (LISNs) shall be used as shown in Figure 21-6.
- d. Power return wires tied locally to the ground plane as noted in Section 20.3.a (6) are not tested.
- e. The time constant of the peak detector must be lower or equal to 1/BW. Where applicable, video bandwidths shall be selected to be greater than or equal to the resolution bandwidth.
- f. Longer dwell, sweep and measurement times than those shown in Table 1 may be necessary to detect time-varying emissions. Dwell times in Table 1 are associated with a potential rate of variation of approximately 60Hz.

1250 Peterson Dr., Wheeling, IL 60090

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 21 Emission of Radio Frequency Energy

Appendix: C

4.0 TEST PROCEDURE (CON'T):

- g. For emission measurements, the entire frequency range for each applicable test shall be scanned. Minimum measurement time for analog measurement receivers during emission testing shall be as specified in the above table. Larger receiver bandwidths may be used; however, they may result in higher measured emission levels.

NOTE: No bandwidth correction factors shall be applied to test data due to the use of larger bandwidths.

- h. Recorded data shall provide a minimum frequency resolution of 1% or twice the measurement receiver bandwidth, whichever is less stringent, and minimum amplitude resolution of 1 dB.
- i. Amplitude versus frequency profiles of emission data shall be automatically generated and shall be continuous.

1250 Peterson Dr., Wheeling, IL 60090

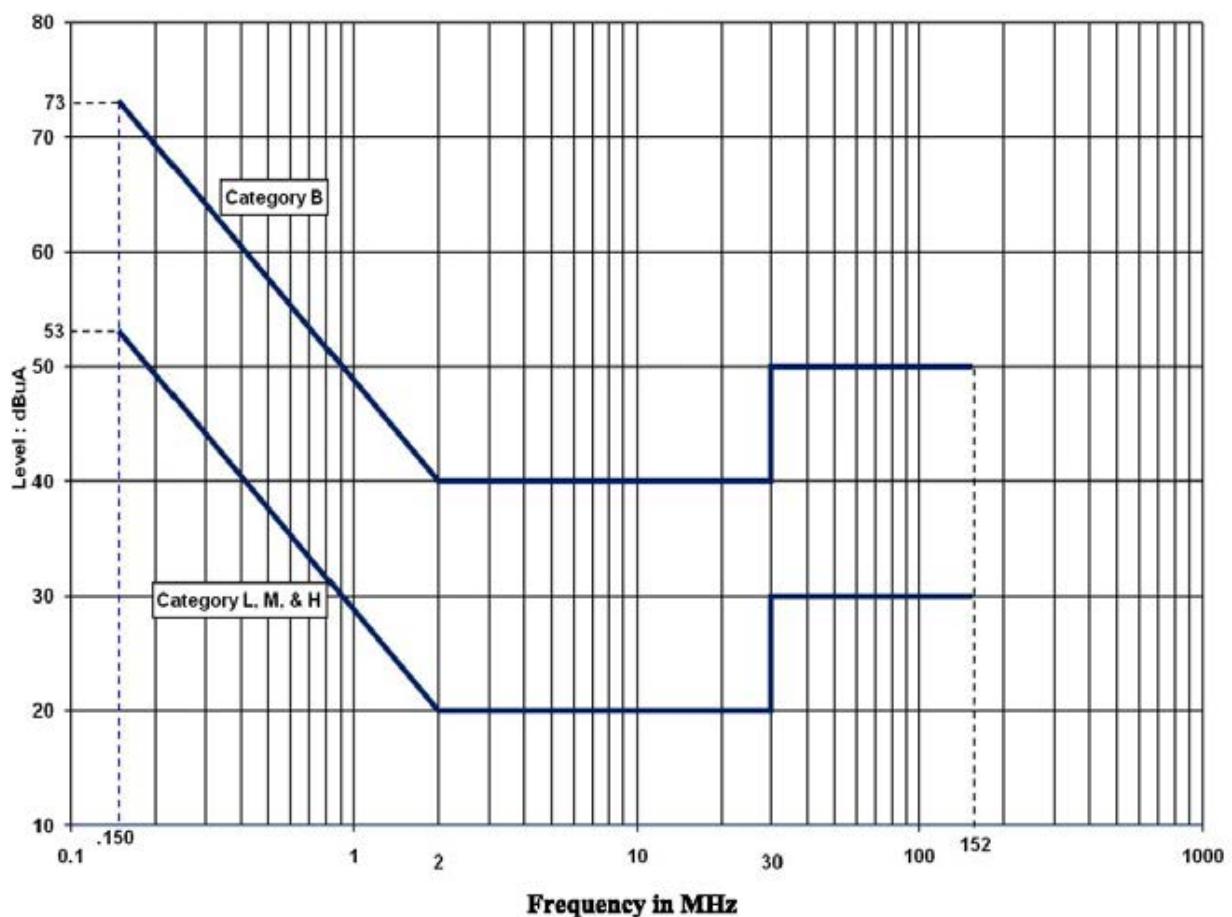

Company: TracPlus Global Ltd
Model Tested: RockAIR
Report Number: 22777
Standard: RTCA/DO-160G Section 21 Emission of Radio Frequency Energy

Appendix: C

D.L.S. Electronic Systems, Inc.

RTCA/DO-160G Section 21 Radiated Emissions

1GHz-8GHz Emissions (peak)

Customer: TracPlus
EUT: RockAIR sn: JJA-RQNA
Limit: Category M
Antenna Setup: Horizontal
Power/ Mode : Ambient
Engineer: JL

Company: TracPlus Global Ltd
Model Tested: RockAIR
